

Dani

Software Engineer

Location: Ottawa, ON (US Citizen)

E-Mail: dani.develops@pm.me

GitHub: github.com/danitheturtle

Portfolio: danitheturtle.dev

Seasoned full-stack engineer with a proven track record delivering critical features for top tier companies. Expertise in React, Vue, Angular, Agile methodologies and cross-functional collaboration. Led numerous overhauls of legacy codebases, showcasing problem-solving prowess, technical acumen and product development strategy. Drove significant cost savings and improved user experiences across multiple projects. Graduated *summa cum laude* in 2019. Known for effective teamwork and communication, with key skills in UI/UX development and systems architecture.

Skills

Languages – TypeScript / ESNext (JavaScript), HTML5, CSS Baseline 2026, Python, C#, Java, SQL

Tools and Frameworks – React, Node.js, Docker, Angular, Vue, Vuetify, Redux, Express, Vite, Webpack, PostCSS, Sass, Tailwind, Tanstack, Astro, MaterialUI, Nginx, Spring, Next.js, GraphQL, Jest, Vitest, Selenium, PostgreSQL, MySQL, Git, Azure, AWS

Skills and Methodologies – Agile/Scrum, Accessibility (a11y), Test Driven Development (TDD), Continuous Integration and Deployment (CI/CD), UI/UX Design, Post-framework Web Design, Internationalization (i18n), Systems Architecture, Project Planning, Time Management, Prioritization, Technical Writing, Product Development, Leadership, Collaboration, “Vibe Coding” Cleanup

Professional Experience

Software Engineer – ZeroTier

July 2023 – September 2025 (2 years 3 months)

- Spearheaded greenfield rebuild of ZeroTier’s legacy SaaS product using Vue, Vuetify, and SASS with a critical focus on relationship-based access control (ReBAC).
- Led development of pixel-perfect, reactive Vuetify component library.
- Added cross-app product analytics using PostHog and Google Analytics that uncovered a 2% conversion rate, increasing revenue by \$300k in the first year alone.
- Integrated React Query into legacy code base, deprecating bloated Redux state and improving frontend performance by 29%.
- Retrofitted Gatsby.js marketing site to use self-hosted Strapi CMS, saving \$3600 per year.
- Worked with Product and Design to shape product vision and translate strategy into actionable plans and deliverables.
- Mentored less senior developers by offering career guidance and teaching ESNext best practices.
- Prototyped SaaS product using Next.js before ultimately switching architectures.

Software Engineer – Callibrity

May 2019 – July 2023 (4 years 2 months)

- Integrated seamlessly with client teams to deliver critical features faster and more reliably.
- Picked up new technologies and languages ad-hoc to meet client needs, demonstrating quickly transferable computer science fundamentals.
- Trained with and worked alongside experts in agile methodology and enterprise product development.

Software Engineer – Crown Equipment

November 2022 – July 2023 (9 months)

Contracted via Callibrity

- Migrated frontend from Angular 10 to 14, boosting performance by 54% and enabling a ground-up, accessible rearchitecting of UX with reactive components, accelerating sales ability to answer customer questions from minutes to seconds.
- Designed complex, stateful user interface representing mechanical constraints of a custom forklift factory. It included a dynamic error validation system with input change side effects capable of handling 100s of rules and edge cases.

Software Engineer – Amano McGann

January 2022 – October 2022 (10 months)

Contracted via Callibrity

- Built a cloud-first, scalable tooling suite in close collaboration with hardware engineers, enabling remote configuration of IoT parking kiosks used by garage customers and attendants.
- Implemented complex entry flow using React and Redux that conditionally used myriad entry configurations – AR camera, RFID, ticketing, credit, physical cash exchange – and was able to handle dozens of client-set discounts and price points.

Software Engineer – Kroger

November 2019 – December 2021 (2 years 1 month)

Contracted via Callibrity

- Built a zero deploy vaccine scheduling chatbot with rapidly changing, county-specific logic using a bespoke directed graph state machine. It served 30 million users by facilitating 2 million vaccinations in the first half of 2021. This solution saved Kroger ~\$1,500,000/month on SaaS fees.
- Created high priority telehealth and drive thru scheduling flows using React in 2 weeks to aid in COVID response.
- Developed a generic scheduler framework library using TypeScript and React, empowering the team to build any type of healthcare scheduler the business asked for.

Software Engineer – Thinkware

May 2019 – November 2019 (6 months)

Contracted via Callibrity

- Developed next-gen product prototype with React and MaterialUI capable of responsively rendering 1000s of employee payroll records.
- Saved time and resources by creating a powerful table component with advanced filtering, column/row reordering, virtualization, and bulk actions.

Software Engineering Intern – Blizzard Entertainment

May 2017 – August 2017 (3 months)

- Learned cornerstone agile practices while building features for the Overwatch website using React, Redux, and Spring Boot REST API.
- Led design and implementation of 2017 Summer Games event page, including sticky video component and cross browser parallax animation.
- Created mobile-first, filterable maps section for Game Overview page.

Education

Rochester Institute of Technology

Bachelor of Science: Game Design and Development

August 2015 – May 2019 (3 years 10 months)

Graduated *summa cum laude*.

- Led 30-student team in creating a large-scale Skyrim mod complete with new locations, armors, scripts and quests. Gleaned invaluable experience in team management and delegation.
- Built a game engine capstone project in C++ and DirectX that included Physically Based Rendering (PBR), an entity-component game object model, particles, and terrain.
